8006 Asn2 - Design	1
State Machine	3
Pseudocode	4
Init:	4
Enable Source NAT:	4
Enable Destination NAT:	4
Forward to Shared Chain:	4
Set Blacklisting Rules:	4
Set TOS settings:	4
Set Whitelisting Rules:	4

State Machine

Pseudocode

Init:

- Flush default rules
- Delete all existing user-defined chains
- Set default policies to drop
- goto ENABLE SOURCE NAT state
- goto ENABLE DESTINATION NAT state

Enable Source NAT:

- Translate outgoing packets to use the firewall's source address
- goto FORWARD TO SHARED CHAIN state

Enable Destination NAT:

- Translate incoming packet to use the internal network's destination address
- goto FORWARD TO SHARED CHAIN state

Forward to Shared Chain:

- Create user chain
- Forward all traffic not bound for firewall machine to user chain
- goto SET BLACKLISTING RULES state

Set Blacklisting Rules:

- Set rules that are specific, and must be specialized beyond whitelisting
- goto SET TOS SETTINGS state

Set TOS settings:

- Set TOS setting for FTP and SSH packets to prioritize data
- goto SET WHITELISTING RULES

Set Whitelisting Rules:

- Set rules that can be easily whitelisting
 - TCP Ports
 - UDP Ports
 - ICMP type
- Exit script
